CRITICAL CARE MEDICINE

THE ROYAL COLLEGE OF PHYSICIANS AND SURGEONS OF CANADA
Objectives of Training and Specialty Training Requirements in Anesthesia

Specific Objectives in CanMEDS Format

Critical Care Medicine is a multidisciplinary field concerned with patients who have sustained, or are at risk of sustaining life threatening, single or multiple organ system failure due to disease or injury. Critical Care Medicine seeks to provide for the needs of these patients through immediate and continuous observation and intervention so as to restore health and prevent complications.

Training will be primarily based on encounters with patients presenting with a variety of medical and surgical illnesses to the two multidisciplinary intensive care units of the London Health Sciences Centre (LHSC), under the supervision of faculty and senior residents/fellows. Faculty and senior residents/fellows will provide teaching by role modeling, bedside teaching and provision of constructive feedback. Patient care rounds, teaching rounds and clinical conferences will supplement patient encounters.

EXPECTATIONS

The Critical Care rotation is offered to residents of many different home programs and level of residency. In all cases, the goal of this limited experience is to provide an overview of the assessment and management of critically ill patients, and to promote the acquisition of the basic knowledge, skills and attitude related to Critical Care.

Over the 1 to 3 block training period, it is expected that residents will demonstrate ongoing development in each of the CanMEDS roles (as outlined below). The objectives are generic and will apply to all junior residents, from any home program (surgery, medicine, anesthesia, etc.) rotating in one of the two multidisciplinary intensive care units of the LHSC.

The acquisition of competencies will be documented using a Critical Care specific in-training evaluation report (ITER) at the end of rotation. Feedback from faculty, senior residents/fellows, nursing and allied health (multisource feedback) will be considered in the final rotation evaluation.

OVERALL GOALS

By the end of the rotation the resident will have acquired some basic knowledge, skills and attitudes necessary to initiate the assessment and management of a patient presenting with a critical illness, and understood the importance of multidisciplinary contribution in the optimal management of the critically ill.
ROTATION OBJECTIVES

At the completion of training, the resident will have acquired the following competencies and will function effectively as:

Medical Expert/Clinical Decision Maker

By the end of the rotation, the resident will have:

- Demonstrated the ability to perform a complete and thorough history and physical examination of the critically ill patient, allowing for a proper differential diagnosis and management.
- Demonstrated an appropriate level of knowledge allowing for the clinical assessment, diagnosis and initial management of a critically ill patient with the following conditions: Hemodynamic instability Respiratory failure Hemorrhage (including massive transfusion) Altered level of consciousness Delirium Nutritional support needs End-of-life issues
- Demonstrated proper skills in initiating promptly a plan for the appropriate management of the above conditions.
- Developed skills for a timely response and organized approach to emergencies situations in Critical Care: Remaining calm Prioritizing appropriately Displaying leadership
- Understood the basics of continuous monitoring (invasive BP monitoring, CVP, ICP, outputs, etc.) and its importance in the close follow-up and management of the critically ill patient.

Specific Procedural / Technical Skills

By the end of the rotation, the resident will have:

- Demonstrated an understanding of the indications, risks and different steps involved in the performance of the procedures mentioned below.
- Demonstrated appropriate skills in the preparation (gathering equipment, assistance, etc.) and performance of the named procedures, particularly relating to infection control and use of protective equipment.
- Demonstrated the technical skills necessary to perform the following procedure(s): Central access - internal jugular central catheter insertion (or femoral-subclavian access when appropriate) Arterial catheter insertion Intubation
- Acquired consistency in properly documenting the procedures performed (successful or not).
Communicator

By the end of the rotation, the resident will have demonstrated:

- The ability to provide a concise prioritized patient presentation during rounds.
- The ability to provide patients and their families with information that is clear and encourages discussion / participation in decision-making.
- The ability to listen and communicate clearly with the ICU team (nurses, allied health, senior residents and consultants) and other services, regarding patient status and management plan.
- The ability to write or dictate clear, concise and up-to-date daily progress notes, discharge summaries and consultation notes.

Collaborator

During the rotation, the resident will have demonstrated:

- Recognition and respect of the roles of the ICU team members (residents, nurses, respiratory therapists, allied health, etc.) AND of the other consulting services in the ICU.
- The ability to deal effectively and constructively with differences in opinion and conflict situations arising in the interdisciplinary ICU environment.

Manager

During the rotation, the resident will have demonstrated:

- Effective organizational and time management skills.
- Leadership skills within the team.

Health Advocate

On completion of the rotation, the resident will have:

- Identified opportunities for advocacy and disease prevention, and prevention of complications in individual patients.
- Practiced preventative care including, for example, use of protective equipment when indicated and sterile technique for catheter insertion.

Scholar

By the end of the rotation, the resident will have:

- Attended and participated in scheduled seminars and journal clubs.
- Demonstrated initiative in learning about their assigned patient’s illnesses, even if not directly relevant to their specialty.
- Show initiative in teaching members of the ICU team (nurses, other residents, etc.) through discussions or presentation.
Professional

During the rotation, the resident will have:

- Demonstrated integrity, honesty and compassion.
- Demonstrated respect for privacy and confidentiality.
- Displayed reliability and conscientiousness in monitoring and follow-up of patients' issues.
- Demonstrated good insight into own performance (aware of own limitations), seek advice appropriately, and take feedback graciously.
- The ability to be prompt and on time for scheduled rounds and seminar.

Approved: June 2013
Communicator
The trainee will demonstrate proficiency in:
- Obtaining a thorough and relevant medical history.
- The bedside presentation of patient problems.
- Discussing diagnoses, investigations and management options.
- Obtaining informed consent for medical procedures and treatments.
- Communication with members of the ICU health care team.
- Communication with referring physicians and their representatives.
- Communication with patients and their families.

Collaborator
The trainee will:
- Demonstrate proficiency in working effectively within the ICU health care team.
- Demonstrate appropriate use of consultative services.
- Recognize and respect the roles of other physicians, nursing staff, respiratory therapists, physiotherapists, occupational therapists, nutritionists, pharmacists, social workers, secretarial and support staff in provision of optimal patient care.

Manager
The trainee will:
- Utilize health care resources in a scientifically, ethically and economically defensible manner.
- Be aware of, and utilize clinical practice guidelines, especially those to prevent potential problems.
- Demonstrate effective time management to achieve balance between professional and personal responsibilities.

Health Advocate
The trainee will:
- Recognize and respond appropriately in advocacy situations.

Scholar
The trainee will:
- Develop and document an effective, personal learning strategy.
• Demonstrate the ability to generate clinical questions related to patient care and utilize and analyze available resources to develop and implement evidence based solutions to such questions.

• Demonstrate practical knowledge of the basic sciences relevant to the critically ill patient including pathology, physiology and pathophysiology, biochemistry, and pharmacology.

• Demonstrate effective teaching skills that are adapted to the needs of the learner.

**Professional**

The trainee will:

• Demonstrate integrity, honesty and compassion in delivery of the highest quality of care.

• Demonstrate appropriate personal and interpersonal professional behaviours.

• Develop and demonstrate the use of a framework for recognizing and dealing with ethical issues in clinical practice including truth-telling, consent, conflict of interest, resource allocation and end-of-life care.

**Evaluation**

All faculty supervisors are encouraged to discuss performance on a regular basis with the trainee. In addition, all supervisors will be asked for feedback on the trainee towards the end of their rotation and an exit interview will be scheduled with the rotation supervisor. The Critical Care Junior In-Training Evaluation Report (ITER) will be reviewed, signed, and forwarded to the offices of the Program Director, Program in Critical Care and to the trainee’s Specialty/Subspecialty Program Director.
