Carol Buck Graduate Scholarship

The Carol Buck Graduate Scholarship in Epidemiology is presented annually to an outstanding graduate student. The scholarship was established to honour Dr. Carol Buck, whose affiliation with the Department of Epidemiology and Biostatistics was from 1952 to 2004. Throughout her career, Dr. Buck's work demonstrated a passionate commitment to advancing human health. Using rigorous methods of epidemiology and biostatistics to identify and correct the causes and determinants of ill-health, she became an international leader in the discipline. Dr. Buck's colleagues and former students respected her amazing clarity of thought and communication. She was a gifted teacher who had a significant impact on many graduate students, medical students and colleagues. The scholarship will be awarded in a ceremony following the Carol Buck Lecture.
