
CASE DISCUSSIONS

CERVICAL DYSPLASIA

A 28 year old woman has a Pap test showing a low grade squamous intraepithelial lesion (LGSIL)

- How will you discuss risk factors and prevention?
- How will you discuss investigation?
- How will you discuss treatment options?

CERVICAL CANCER

A 47 year old woman presents with post coital bleeding and low back pain

- What is your differential diagnosis?
- What pertinent history will you elicit?
- What focused physical examination will you perform?
- What investigation will you order?
- What treatment options are available?
