12:00 to 1:00 p.m. in Rooms A3-924A/B
London Regional Cancer Program

“Reducing Lung Toxicity in Lung Cancer: Qualitative and Quantitative Approaches”

Dr. Andrew Hope
Radiation Oncologist, Princess Margaret Cancer Center

Objectives:
- Current models of lung toxicity aren’t perfect and don’t always predict risk well.
- Interactions between heart and lung toxicity make interpretation of toxicity difficult.
- There may be novel methods to identify patients at risk of developing lung toxicity using radiomics/imaging biomarkers derived from on-treatment imaging.
