

Autoclave Cycle Verification Testing Using Biological Indicator Ampoules

Human Resources,
Occupational Health & Safety
Western University, August 2012

Tests using biological indicator ampoules to prove that autoclaving has rendered the laboratory waste non-hazardous must be conducted at least every 6 days or before any waste is placed into the municipal waste stream as specified in Guideline C.

-Non-Incinerated Technologies for Treatment of Biomedical Waste, Ministry of the Environment, Ontario, December 2001
