

AVERAGES REQUIRED FOR ADMISSION TO HONORS SPECIALIZATION MODULES IN THE BMSc PROGRAM

Each Honors Specialization module has a maximum capacity in both Years 3 and 4, as determined by each department and indicated in the chart below, and an average of at least 75% on a particular group of courses is required for admission to each Honours Specialization module. If the number of students applying for a module is greater than the maximum capacity of the module, then the module will be filled with students having an average greater than 75%. The average of the last student admitted to the module for a given year is displayed below - information about admission to Year 3 is in the left-hand columns and information about Year 4 is in the right-hand columns.

Yr 3: see the purple arrow below  the "minimum average required" for students entering Year 3 is the average achieved on the 2000-level courses listed in the Admission Requirements by the *last* student admitted to that Honors Specialization module (or group of Honors Specialization modules) for that year. This average will never be less than 75% (admission to Year 3 BMSc requires an average of at least 75% on these courses).

for full details about admission to Year 3 BMSc and the Honours Specialization modules: [> See \(i\) MODULES OFFERED IN THE BMSc PROGRAM](#) [\(ii\) ADMISSION TO BMSc](#) and (iii) the courses in the Admission Requirements for each Honours Specialization module

NOTE: Students in Medical Sciences 2 who satisfy the conditions for assured admission to Year 3 BMSc receive priority placement in the Honors Specialization modules in Year 3. Students from the "competitive pool" are then considered for admission to the remaining spaces in the modules. Some Honors Specialization modules may fill in Year 3 before the ITR choices of the students applying from the competitive pool are considered.

Yr 4: see the red arrow below  the "minimum Weighted Average" below for students entering Year 4 is the Weighted Average achieved on the 2000- and 3000-level courses listed in the Weighted Average Chart by the *last* student admitted to that Honors Specialization module (or group of Honors Specialization modules) for that year. The minimum Weighted Average will never be less than 75%.

for full details about admission to the Honours Specialization modules in Year 4 BMSc: [> See MODULES OFFERED IN THE BMSc PROGRAM](#) **NOTE:** the link - "Modules offered in the BMSc Program" - includes the Weighted Average Chart.

NOTE: although students in Medical Sciences 2 who satisfy the conditions for assured admission to Year 3 BMSc are given priority in admission to the Honors Specialization modules in Year 3, all students in Year 3 BMSc are considered equally for admission to the Honors Specialization modules in Year 4, provided the appropriate courses (i.e., those listed in the Weighted Average Chart) have been completed by the end of Year 3 BMSc.

Physiology												
Physiology and Pharmacology												

* The capacity represents the maximum number of students admitted to this **group** of modules. For example, all students who apply to the Honors Specialization modules in Pharmacology, Physiology, and Physiology and Pharmacology for Year 3 are pooled together and the top 80 students are admitted regardless of which of the three Honours Specialization modules they requested.

** Some Year 4 research project supervisors are crosslisted in these departments so there may be some variation in the actual number of students accepted to each of the Honors Specialization modules in this **group** of modules. The total number of students admitted to this group of modules will not change.

FULL+: the module filled with students in Medical Sciences 2 who satisfied the conditions for assured admission.
