Each Honors Specialization module has a maximum capacity in both Years 3 and 4, as indicated in the chart below. The minimum averages displayed below are not pre-determined - only the maximum capacity for each module (or group of modules) is pre-determined. For some modules, the capacity decreases from Year 3 to Year 4 since the department offering the module anticipates that some students will not return for Year 4 (e.g. some students will leave for professional programs after Year 3).

The "minimum average required" below for students entering Year 3 is the average achieved on the 2000-level courses listed in the Admission Requirements by the last student admitted to that Honors Specialization module (or group of Honors Specialization modules) for that year. This average will never be less than 75% since admission to Year 3 BMSc requires an average of at least 75% on the 2000-level Admission Requirements.

### AVERAGES REQUIRED FOR ADMISSION TO HONORS SPECIALIZATION MODULES IN THE BMSc PROGRAM

### Notes:
1. The capacity represents the maximum number of students admitted to this group of modules. For example, all students who apply to the Honors Specialization modules in Pharmacology, Physiology, and Physiology and Pharmacology are pooled together and the top 80 students are admitted (each student is admitted to the module that he/she requested).
2. Some Year 4 research project supervisors are crosslisted in these departments so there may be some variation in the actual number of students accepted to each of the Honors Specialization modules in this group of modules. The total number of students admitted to this group of modules will not change.
