Management Principles for Physicians: Using Simulation Modeling to Enhance Resource Utilization in a Healthcare Environment

Dr. Fahim Ahmed

Dr. Fahim Ahmed is a Teaching Fellow (Lecturer in teaching and scholarship) at the department of Management Science, University of Strathclyde, Glasgow, Scotland. His research interests include the application of Discrete Event Simulation (DES) within healthcare operations. His expertise is mainly in the use of DES for modelling problems including patient-flows, resource allocation, and capacity planning. His other areas of interest are problem structuring, simulation education and pedagogical innovations in Higher Education. Dr Fahim holds BE in Electronics and MSc in Automation and Control Engineering. He completed PhD in Operations research and Management science from Loughborough University, UK in 2015. He is an active member of Operational Research Society, UK, and a Senior Fellow of Higher Education Academy (SFHEA). Dr Fahim had an instrumental role in the university’s response to Covid-19 in early 2020. He has been supporting the simulation modelling project which created ongoing impact in support of the health board’s response to the operational and strategic challenges of the pandemic in Scotland. Dr Fahim has co-designed and delivered several CPDs to the NHS professionals at the department of Management Science, Strathclyde University.
