Management Principles for Physicians: Using Simulation Modeling to Enhance Resource Utilization in a Healthcare Environment

Dr. Mazi Raz

Mazi is an Assistant Professor in the Strategy area group. He is a founding member of Ivey's EDI Advisory Council and a research fellow in Innovation North Learning Lab. Mazi earned a Ph.D. and MBA from Ivey, with research and teaching interests in the relationship between human imagination and management practices in the face of complexity. Specifically, he is curious about how we can better develop imagination in professionals—in the kind of leaders they become, the visions for organizations they lead, and the futures for the society they shape. Mazi teaches Strategy, Systems Thinking, and Power & Politics courses in Ivey's Executive Education, MBA, MSc. and HBA programs. He is passionate about advancing pedagogies and teaching practices at the intersection of arts and problem-based learning. Before returning to Ivey, Mazi held senior roles with The Ivey Academy, Sauder Executive Education at UBC, Banff Centre for Arts and Creativity, Peter Lougheed Leadership Institute, and Carlson School of Management at the University of Minnesota.
