

# GRADUATE STUDIES 2021/22 INFORMATION SHEET

## PUBLIC HEALTH MPH

Get ready to lead. With real public health issues as the foundation of your learning, you will be immersed in some of the most significant and complex public health crises that our country and globe have experienced. Our MPH Program offers a unique intersection between leadership, policy and sustainability.

During this 12-month, case-based/experiential learning Program, you will have the opportunity to apply your previous experience to discuss a wide range of views and practices while gaining the knowledge and skills to lead in an ever-changing and increasingly challenging public health landscape.

With a special focus on public health issues experienced in urban and rural settings, First Nations populations across Canada and international populations, this Program will help you foster a special skill set to better understand and assess health problems and develop appropriate solutions for various communities.

A 12-week practicum, a field trip to a public health conference and the unique opportunity to learn from an integrated, interdisciplinary faculty will further enhance your in-class, small group and independent learning.

*The MPH Program is accredited by the Council on Education for Public Health.*
