Subject: Welcome to Year 4 Honors Specialization IMS

Hello and Welcome to Year 4 Honors Specialization IMS!

I hope you are all doing well. I know this past year was challenging, but we are so excited to be working with you during the 2021/2022 academic year. Our program learned so much from the past year and we believe that the circumstances actually strengthened our capstone courses. You may have noticed that there are a few changes to the HSP IMS module (listed below) and for that reason, Kathy Boon and I wanted to make sure we offered an informative Q/A session. Therefore, please join us on [Zoom on Wednesday June 16th from 4 to 5 pm](#). No need to register, but you will need to login with your uwo account. This session will be recorded and if you can't make it, please email your questions in advance.

***NEW this year**

- 4990E (full year, 1.0 lab course)
- 4930F (fall term only, 0.5 course, updated title and description)
- 1.5 4000-level courses from basic medical science disciplines (can include MedSci 4300A and/or 4200B, but not required this year)

Please note that these changes will be reflected in the Graduate Worksheets before our June 16th session. They have currently been removed from the website to avoid confusion.

I look forward to seeing you virtually on June 16th.

Nicole Campbell, PhD PME

Assistant Professor, Physiology and Pharmacology
Director, Interdisciplinary Medical Sciences
Western Teaching Fellow and Experiential Learning Scholar
