

Novell Migration – Join UWO Domain

As you are aware, we are in the process of migrating from our Novell system to Western's Active Directory system.

As of Friday May 25, starting with Clinical Skills, a member from the Information Services Helpdesk Team (Ramiro, James, Nathan, Erin, Jon, Dapo or Isaac) will be coming on site to run a piece of software on your workstation to prepare your device for the Novell migration and join the UWO domain. Depending on the speed of your workstation, this should take about 10 – 20 minutes.

In order for you to be able to continue accessing your data on the U: and T: drives after the migration you will need to ensure to set your Novell (OES) network password to match your Western password. If you have already completed this step, there is no need to do so again. If you have yet to update your password to match your Western password, please do so by following the instructions on our [Novell Migration Resources](#) webpage under the **How To: Updating Novell (OES) Password to Match Western**.

If you have any questions, please contact the Help Desk at helpdesk@schulich.uwo.ca or x81377.
