

## Physiology Prerequisites for Schulich Dentistry

### 2020-2021 Application Cycle

Dentistry requires all incoming students to have a thorough knowledge of human or mammalian systems physiology, which should include all of the following:

- neurophysiology (autonomic, sensory, motor and integrative)
- muscle
- cardiovascular
- respiratory
- gastrointestinal
- renal
- endocrine
- metabolism
- reproduction
- homeostasis

To satisfy the physiology prerequisite requirement, all applicants must successfully complete an approved full-year course or course equivalent (6 credit hours) by April 30<sup>th</sup> of the application cycle in which they apply, or write the challenge exam, and earn a pass or credit designation. In some cases more than a full year of approved courses may be required to cover all the physiology content our Doctor of Dental Surgery program requires. If more than one course is listed, then a pass or credit designation must be attained in **each course** listed in the combination.

The following options are available for obtaining the physiology prerequisite:

1) **Successful completion of a course, or course combination, listed in the table below.**

Since individual universities may alter their course offerings or the content of a course, this list is subject to change without notice. If your home university does not offer a listed course, please review the list as there are other universities that have approved distance education courses.

The absence of a course from this list does not necessarily imply that it is deficient or inadequate. If your university offers a physiology course or course combination covering the above mentioned subject areas in detail, please email the Admissions Office to request a review by Western University. You must indicate in your email an explanation of what course or course combinations you wish to have considered and must attach a **detailed course syllabus that includes course content, textbook and grading information for each course mentioned**. In cases where the request to review includes a course that is not on the approved list to be considered with a course at that institution that is on the approved list you must still submit the syllabus of the already approved course.

Please note:

- There may be courses listed that are not offered but they remain on the list as they are approved courses as long as they are not more than 10 years old. If there is a discontinued course that still appears on this list that is more than 10 years old, please email the Admissions Office with the relevant information so we can update the list.
- Course reviews for future applicants take place between April and August. Only applicants who have applied in the current application cycle have course reviews completed between September and March.

## 2) **Physiology Challenge Exam**

The Physiology Challenge Exam is offered to candidates who are invited for an interview, who will not have been able to fulfill the physiology course requirement by the end of the application cycle (April 30). Applicants have the opportunity to indicate their willingness to write the challenge exam as part of their application to Schulich Dentistry.

The Physiology Challenge Exam will be held during the interview weekend in February or online if in-person interviews are not possible. It is available only to candidates who are competitive in the applicant pool and have been invited for an interview. The exam is similar to the instrument used to evaluate students who take Physiology 2130 at Western. It is a multiple-choice exam in. A pass (minimum 50%) is required for your physiology background to be judged acceptable. A physiology course taken after the challenge exam will not be considered. There is a fee to cover the costs of administering this exam.

To be successful in the challenge exam, students should be familiar with human systems physiology at the level presented in a recent edition of **one** of the following textbooks:

**Human Physiology: The Mechanisms of Body Function**, by Vander, Sherman and Luciano (McGraw Hill).

**Human Physiology: An Integrated Approach**, by Silverthorn (Prentice Hall).

**ACCEPTABLE PHYSIOLOGY PREREQUISITES  
FOR THE SCHULICH DENTAL PROGRAM**
