# I. Research Focus

Global Health & Access to Surgery and Anesthesia Health Technology Assessment ■ Evidence-Informed Decision-Making ■ Knowledge Translation ■ Evidence Synthesis ■ Health Economics ■ Optimizing Value in Healthcare ■ Know4Go ■ Health Policy

My primary areas of research include surgical and anesthesia global epidemiology, health technology assessment (HTA), evidence-informed decision-making (DM), health policy, and knowledge translation (KT), with specific interest in the real-world application of evidence synthesis, health economics, priority-setting, and contextualization in order to optimize the value of healthcare innovation, primarily in the hospital setting.

Recently, my research and service work has further expanded beyond the hospital setting to inform decision-making and health policy provincially (Ministry of Health), nationally (Health Canada), and internationally (World Health Organization).

- 4. Government of Canada White Paper. Health Technology Assessment, Health Technology Management and Decision-Making in Canada: Combining Evidence, Economics, and Contextualized Social-Legal-Ethical- Implementation Issues to Improve Healthcare in Care, Jan 2012. White paper invited by Health Canada to explore Know4Go as an innovative framework to link the evidence, economics, ethics (and other essential 'sleeper' aspects that influence decision-making), in order to make explicit the multidimensional opportunitycost "tradeoffs" when assessing multiple technologies at various levels of decision-informing (national planning, government and regional decision-making and implementation). The potential for using the framework to visualize the dependent links and tradeoffs between technology uptake and disinvestment was proposed from a variety of perspectives as a basis to increase national coordination of health technology assessment and management, while respecting the need to maintain independence and contextualization at the provincial level. Linking planning, assessment, implementation, with real-worldoutcomes feedback into the framework was emphasized.
