STATEMENT 3.2.0 – AN OVERVIEW OF THIRD AND FOURTH YEARS
Undergraduate Medical Education

Approved by: Clerkship & Electives Committee
Date of original approval: August 2014
Date of last review: December 2017

I. PURPOSE

The third year of the undergraduate medicine curriculum consists of Clerkship. This is followed in fourth year by Clinical Science Electives and Integration & Transition.

II. DEFINITIONS

Clerkship Begins in August of third year and consists of a one-week mandatory introduction program followed by 51 weeks of an integrated clerkship. This includes 48 weeks of clinical rotations and three weeks of vacation.

Clinical Science Elective Taken in the fall term of fourth year in areas of interest to the students.

Integration & Transition Classroom sessions in the spring term of fourth year.

Professional Portfolio A longitudinal curricular ribbon that spans the first three years of medical school, laying the groundwork for reflective professional habits.

III. STATEMENT

1.0 The Clinical Clerkship allows students to apply their basic knowledge acquired in the first two years of medical school in the clinical setting.
2.0 Students will be assigned to clinical care teams and will work under the supervision of faculty and house staff with varying levels of seniority.
3.0 All students will experience a broad range of clinical exposure, including a mandatory minimum of four weeks of clinical training in an approved centre outside of the London or Windsor teaching hospitals.
4.0 Students will be assigned to clinical units participating in the care of patients and will care for patients in the office, clinic, or hospitals under direct supervision of faculty and residents.
5.0 Students will have the opportunity to take graded responsibility for patient care in a supportive setting where a balance will be established between time for service work and education.
6.0 The Clinical Clerkship is a single course of 8 course weights. The rotations that are the core components of the clerkship are:
   6.1 Family Medicine – 1.0 weight 6 weeks
   6.2 Internal Medicine – 2.0 weights 12 weeks
   6.3 Obstetrics & Gynaecology – 1.0 weight 6 weeks
   6.4 Paediatrics – 1.0 weight 6 weeks
   6.5 Psychiatry – 1.0 weight 6 weeks
6.6 Surgery – 2.0 weight 12 weeks

7.0 Professional Portfolio is a required part of clerkship with an assessment of Pass/Fail.

8.0 Sixteen weeks of Clinical Science Electives will be chosen in areas of interest to the students. Further information regarding this part of the curriculum will be provided separately.

8.1 Assessment for feedback occurs daily in Clinical Science Electives as the learner interacts with house staff and clinical faculty. Frequent observation during patient care activities forms the basis for such feedback.

8.2 Assessment for progression in Clinical Science Electives is tested via the Year 4 Objectives Structured Comprehensive Examination (OSCE). The OSCE will test students' mastery of the overall objectives of the clerkship and clinical electives. This evaluation will assess students' knowledge, clinical skills, professional conduct and clinical reasoning using real and simulated clinical settings.

8.3 Students will complete the OSCE while enrolled in Integration & Transition

8.4 As per Progression Requirements, successful completion of the OSCE is required (an overall grade of PASS) to pass Clinical Science Electives and to graduate from the Doctor of Medicine Program.

8.4.1 A student who receives a grade of FAIL on the OSCE may be offered remediation at the discretion of the Course Chair.

8.4.2 As per the Program Requirements above, remediation in the Doctor of Medicine program is a privilege and may not be offered upon failure of the OSCE.

8.4.3 Failure on the OSCE without remedial privilege will require a student to withdraw from the program.

8.4.4 If remediation is offered, and a score of FAIL is achieved on the remediation, a student will be asked to withdraw from the program.

9.0 Students who fail to complete the requirements for any portion of the Clinical Clerkship and are provided with remediation will be required to complete remedial work during the Clinical Science Electives period.

10.0 During the fourth year Integration & Transition, students return to the classroom in January for a review of basic medical sciences as applied to clinical medicine. Further information regarding this part of the curriculum will be provided via OWL.
