

DIAGNOSTIC CHALLENGES

Pancreas FNAB

Dr. M. Weir

Oct 2017

The background of the slide is a solid blue color. In the bottom right corner, there are several faint, concentric circles that resemble ripples in water, adding a decorative element to the design.

CONFLICT OF INTEREST DISCLOSURE

- I have not had in the past 3 years, a financial interest, arrangement or affiliation with one or more organizations that could be perceived as a direct or indirect conflict of interest in the content of this presentation.

OBJECTIVES

After this session on pancreas eus fnab, should be able to:

- **Recognize** diagnostic approaches to complex cytological problems
- **Expand** knowledge & skills in interpretation of advanced cytology sampling techniques

AGENDA

- 2 cases
- Pancreas eus fnabs

Photos:

Hologic, PathologyOutlines, cytology.wordpress.com

researchgate, PathPedia.com

Case 1

- 55 year old female
- Body of pancreas (BOP) mass
- Solid, 5 x 4 cm
- Transgastric EUS FNAB

What is the pattern?

What is the pattern?

**GLANDULAR
& ACINAR**

What is your diagnosis?

What is your diagnosis?

- a) Neoplastic mucinous cyst
- b) Gastric contamination
- c) Pancreatic endocrine neoplasm
- d) Acinar cell carcinoma
- e) Solitary pseudopapillary neoplasm

Approach

- Clinical & imaging important
 - if solid – use **algorithm** for DDX
- **Microscopic approach**
 - **A**dequacy
 - **B**ackground
 - **C**ontamination
 - **D**iagnosis

ALGORITHM:

Solid Pancreas Mass EUS FNAB

Non-neoplastic

- Normal contaminant
- Pancreatitis
 - chronic
 - autoimmune
 - acute
- Infection

Neoplastic

- Adenocarcinoma, ductal
- Pancreatic endocrine neoplasm
- Acinar cell carcinoma
- Solid pseudopapillary neoplasm
- Pancreaticoblastoma
- Metastasis

ALGORITHM:

Acinar pattern

Non-neoplastic

- Normal contaminant
- pancreas
- Pancreatitis

Neoplastic

- Pancreatic endocrine neoplasm
- Acinar cell carcinoma
- Solid pseudopapillary neoplasm
- Pancreaticoblastoma
- Metastasis

Other patterns: single cells, glandular, cystic

ADEQUACY: ROSE

- **Define adequacy** to accommodate threshold differences in interpretation
- **Solid** lesion:
 - Epithelial predominant: > 10 groups
 - Inflammation: may not be lesional
- **Purpose:** triage for ancillary studies
NEED cell block!
Do cores

Fat necrosis & pancreatitis

B
A
C
K
G
R
O
U
N
D

Coagulative necrosis: malignant

BACKGROUND: Mucus/Mucin

GI luminal mucus

- watery, thin, dirty, heterog
- bare nuclei, food

Mucin

- thick, uniform
- cracked, colloid-like

BOTH + mucin stains

CONTAMINATION

Pancreas

Patterns

Single cells
Glandular
Acinar

DIAGNOSIS: LO POWER

Glandular Pattern

Mucosal Contamination

- Low to high cellularity
- Cohesive, 2-D, flat
- Polarized groups
- Naked grooved nuclei
- In mucus blobs

Adenocarcinoma

- High
- Loosely cohesive, 3D
- Drunken honeycomb
- Single abN cells
- Necrosis (coagulative)

Mucosal contamination
Polarized, cohesive

Ductal adenocarcinoma
Drunken honeycomb, atypia

CASE 1

GI mucus
Gastric mucosal contam'n

What about the acinar pattern?

DIAGNOSIS: LO POWER

Acinar Pattern

Contamination

(pancreas/pancreatitis)

- Lo – mod cellularity
- Cohesive, polarized
- Grape-like clusters
- Acini, ductal, islets

Neoplasm

- Variable cellularity
- Dyshesion
- Single cells
- Uniform cell type

DIAGNOSIS: HI POWER

Acinar Pattern

Contamination

(pancreas/pancreatitis)

- Lobular
- CB: 2-toned cytoplasm
- Granular cytoplasm
- Lymphoid tangles
- CB: fibrosis, loss of acini

Neoplasm

- Vascular (PEN, SPN)
- Nuclear clues
 - salt/pepper (PEN)
 - grooves (SPN)
 - ++ nucleoli (ACC)

Grapes

Normal pancreas

C

Chronic pancreatitis

Lobular, two toned

Fibrosis, atrophy

PEN

Acinar Pattern

SPN

ACC

Acinar pattern

Single cells

Large polygonal

Smaller finely granular

Acinar pattern

Chief cells (purple)
Parietal cells (pink)

PATHPEDIA.COM

CASE 1

Non-lesional
Normal gastric oxyntic
(body type) glands

Remember to exclude contaminant first

Case 2

- 60 year old male
- Distal pancreatectomy for PEN
- TOP region mass
- Transgastric EUS FNAB
- ??recurrent PEN

What is the pattern?

What is your diagnosis?

What is your diagnosis?

- a) Gastric contamination
- b) Pancreatic endocrine neoplasm
- c) Renal cell carcinoma
- d) Solitary pseudopapillary neoplasm
- e) Something else?

Approach

- Clinical & imaging important
 - if solid – use **algorithm** for DDX
- **Microscopic approach**
 - **A**dequacy
 - **B**ackground
 - **C**ontamination
 - **D**iagnosis

ALGORITHM:

Acinar pattern

Non-neoplastic

- **Normal contaminant**
 - pancreas
 - gastric oxyntic cells
- **Pancreatitis**

Neoplastic

- Pancreatic endocrine neoplasm
- Acinar cell carcinoma
- Solid pseudopapillary neoplasm
- Pancreaticoblastoma
- Metastasis

Other patterns: single cells, glandular, cystic

ADEQUACY: ROSE

- **Purpose:** triage for ancillary studies

NEED cell block!

Do cores

- **EUS toys**

- Shark cores
 - decrease # smears
 - better sampling fibrosis
 - id invasion: stromal, perineural
 - material for immunomarkers

PEN

Dyshesive, homogeneous
Salt & pepper
Cell block: insular/acinar pattern
Chromogranin, synaptophysin +

SPN

PATHPEDIA.COM

Vascular
Heterogeneous
Pseudopapillary
Grooved nuclei
B-catenin, CD10 +
Chromo -, synapto +

ACC

Dyshesive
Loose acini
Nucleoli
Chymotrypsin, trypsin +

Cell block

Foamy vacuolated cytoplasm
Bland nuclei

Lacks salt/pepper
No grooves
Not vascular

Cell block

Inhibin +
Melan-A +

ADRENAL CORTICAL CELLS

Outer layer

- foamy lipid rich background
- single cells, clusters
- bland oval nuclei
- no or small nucleoli
- abundant vacuolated cytoplasm with frayed edges

Inner Layer

- smaller cells
- lipofuscin pigment
- granular eosinophilic cytoplasm
- no vacuolization

What is the pattern?

What is your diagnosis?

CASE 2

➤ How would you report this?

CASE 2

- How would you report this?
- Indeterminate
- Adrenal cortical sampling
- May represent normal cortex or neoplasm (benign/mal)
- Distinction not possible based on fnab alone

ALGORITHM:

Acinar pattern

Non-neoplastic

- **Normal contaminant**
 - pancreas
 - gastric oxyntic cells
 - adrenal
- **Pancreatitis**

Neoplastic

- Pancreatic endocrine neoplasm
- Acinar cell carcinoma
- Solid pseudopapillary neoplasm
- Pancreaticoblastoma
- Metastasis
- Adrenal neoplasm

Optimization Cell Blocks

- ROSE triage

- once dx made, then CB #1 priority

- Increase # CB & fixative types

- formalin, Cytolyt, cores, pellets, Histogel

- Avoid refacing CB

- Cut H&E levels

Remember sampling
of adjacent structures

Take home points

- Use solid, acinar **algorithm** for DDX
- Remember **ABCDs**
- **Consider**
 - normal contaminants
 - adjacent structure sampling
- Optimize **cell block** use

Questions?
