

## The Research Office

The overall goal of the Research Office at the Schulich School of Medicine & Dentistry is to help Faculty gain a competitive edge when applying for funding opportunities. Specifically, the Research Office identifies and widely disseminates possible funding sources, including targeting it to individuals and teams as appropriate. In providing support to faculty members at the proposal development stage, the Research Officers may be involved in one or all of these tasks:

- 1) Development of interdisciplinary teams;
- 2) Industry connection, development of intellectual property and commercialization;
- 3) Conceptualization, visioning, goal setting and research career mapping;
- 4) Providing critical reviews including tips on grantsmanship;
- 5) Arranging internal peer review;
- 6) Liaison with funding agency program officers;
- 7) Providing administrative review of applications including assistance with the signature and submission processes.

The Research Office team gives priority to large and complex applications - such as to the Canada Foundation for Innovation, Canada Research Chairs, Networks of Centres of Excellence, Ontario Government Programs, SPOR and other major CIHR programs, OBI programs, and international funding programs such as Grand Challenges Canada, the Gates Foundation and NIH.
